

Transform your Data Center

Learn how to easily allocate Storage, Networking and Compute with a Software Defined Datacenter built with Windows Server and System Center 2016

Datacenter operations seem to earn more scrutiny than budget these days. New applications stretch the operational fabric and create infrastructure backlogs that can slow down business.

Organisations that have already gained all available cost savings from server virtualisation should now be virtualising networking and storage. By doing so, they can reduce costs using less expensive hardware as Hyper Converged Infrastructure (HCI), eliminate complexity, and gain the ability to manage by policy, automation, and orchestration, versus manual and static configurations.

Why our solution is different

- We will work with you to ensure you make the right choice of hardware
- Our methodology is production proven, and performed by some of the best engineering people in the Datacenter space
- We have automation scripts pre-developed off the shelf and ready to go, that will deliver day one value for you
- System Center + Windows Server 2016 give un-matched synergies in the datacenter

Accelerate Time to Value

Get up and running quickly on a solution that's already been built and tested by Vigilant.IT and running today in customers datacenters.

Optimise Performance Settings

Take the guesswork out of solution tuning. Vigilant.IT solutions are optimised to run best on any vendors hardware

Choose your hardware

With seven HCI vendors and growing, select who's best for you and Vigilant.IT will ensure your bill of materials is technically correct

"We knew our current Infrastructure needed to be renewed and was holding us back. Vigilant.IT provided a solution that gave us the flexibility we needed for our datacenter and worked with our hardware vendor to ensure a smooth Implementation, whilst transferring valuable knowledge to us in the process"

-Kieron Mulcahy IT Manager Our Vacation Center
