

Azure AD Deployment

Are you maximising your Azure AD investment?

For many enterprise customers, they've paid for Azure AD but aren't aware of features like self-service password reset and multi-factor authentication that can help the business. For others, identity management is just too hard, and gets put on the back burner.

The Azure AD Deployment solution enables some of these "quick-win" features in less than a week. This provides tangible benefits back to the business, and opens the door to additional features like Identity Protection, which provides greater peace of mind around cloud identity.

What you get

- An **enterprise class Azure AD Premium service** with 99.9% SLA, enterprise grade security, and industry leading privacy and security compliance.

Have EM+S E5 licenses?

- Azure Advanced Threat Protection is now included, and provides a cloud-based security solution that helps you detect and investigate security incidents across cloud and on-premise networks.

Self-service password reset

- **Anywhere, anytime** - users can reset their password day or night wherever they are, reducing help desk calls by up to 20%.
- **Account lockout** – also works if a user has locked their account.
- **Hybrid solution** – works with both on-premise AD & Azure AD, and enforces all AD policies.

Multi-Factor Authentication

- **Layered security** - require two-factor authentication (app, text, call) when users are in "untrusted" situations eg email over the web.
- **Real-time alerts** – security services and machine-based learning identify suspicious sign-in patterns and can alert IT in real-time.

Cloud identity "peace of mind"

- **Identity Protection** – detect potential vulnerabilities affecting your organization's identities, configure automated responses to suspicious activity, and investigate and resolve suspicious incidents.
- **Cloud App Discovery** - find out what cloud apps your users are using, and simplify & secure their sign-in experience eg single sign-on.

Why Vigilant.IT?

- Over a decade of Microsoft cloud experience and Azure AD work.
- Multiple Microsoft Gold cloud competencies and product testing experience with Microsoft.
- Qualified Azure Architects and Microsoft MVPs (Most Valued Professionals).
